COURSEWORK

FIRST YEAR

Hardware • Architecture • Databases •
Functional Programming • Logic •
Reasoning about Programs •
Mathematical Methods • Discrete Maths

SKILLS

PROGRAMMING

Python • Java • Visual Basic • HTML •
CSS • C • Haskell • Assembly • C# •
JavaScript • MySQL • \LaTeX

TECHNOLOGY

Linux • Windows • Git • SVN

EXTRA CURRICULAR

Hackathons - IC Hack, Hack the Midlands,
HackUPC Barcelona • Former matchday
programme editor and media secretary,
Haverhill Borough FC • Grade 5 piano •
Imperial College archery • Jack Petchey
award for services to the community

EXPERIENCE

FIRE TECH CAMP | TUTOR

July 2017 - August 2017 | London, UK

- Tutored at two sites in London, teaching coding and video game design to children aged 9-12.
- Planned lessons and worked closely with a cotutor to deliver course content, and then presented the children's work to the whole camp at the end of each week.

FRONTIER SILICON | JUNIOR ENGINEER

August 2016 - September 2016 | Cambridge, UK

- Worked with the Sustaining and Support team for 6 weeks on the company's internet radio platform, written in C.
- Involved debugging hardware and software, attending project meetings, and communicating with clients about product issues.
- All code was reviewed, and where applicable pushed to production.

WEBSITE DESIGN | FREELANCE DESIGNER

2016 - Present | Haverhill, UK

- I have designed, and continue to maintain, the websites for Haverhill Community Sports Association and Newton David Ltd.
- Both sites run using the Wordpress platform with custom themes.
- Worked with a graphic designer and liaised with marketing officers to develop both companies a professional online presence.

PROJECTS

TWEETSCRAPER | PERSONAL PROJECT

Summer 2017 - Present

An ongoing project with a friend that attempts to find correlations between social media sentiment regarding a company, and the company's stock price. It will then use this to predict future stock movements based on current social media activity.

ARM11 EMULATOR AND ASSEMBLER | UNIVERSITY PROJECT

May 2017 - June 2017

A third term university project, in which I worked with three other students to write in C an ARM11 emulator and assembler, and then write assembler programs to be assembled and deployed on a Raspberry Pi. The project was selected among the best in the year.

WHO'S IN | DJANGO WEB APP

Summer 2017

A Django-based web app for monitoring network traffic, sending alerts when new devices are connected, and predicting who is currently at home based on device activity.

FRACTAL INVESTIGATION | SIXTH FORM PROJECT

January 2016 - March 2016

An investigation into 2D fractal rendering, written in Python. I added OpenCL support to improve calculation times. I also researched 3D fractals, and their foundations in hypercomplex numbers.
