GRUNDSTEIN GLOBAL

Member Role: Web Developer

About Grundstein Global

Grundstein Global is a community, and your personal network, of highly motivated and talented students. The community is shaped and run by its members.

Our mission is to create a community for ambitious, talented and globally minded individuals who can inspire one another to excel in their chosen career paths and build lifelong relationships.

Why Join Us?

The environment of a person profoundly shapes the path they take. More importantly, the people one spends time and works with heavily influence one's entire life. By joining Grundstein, you will be surrounded by eager and talented people from different fields. This will influence your ideas, the way you work, the possibilities you have.

Grundstein does not only connect you with successful people. It also drives you to be more successful.

Primary Role Description

We are looking for a web developer to join our passionate team. The role entails conscientiousness as well as a keen eye for web-design and UX to help develop our community's online platform. This role is ideal for sociable individuals willing to learn and grow with us, and have an active hand in shaping Grundstein's future.

The member's responsibilities include, but are not limited to:

1. You will build a new website for Grundstein Global and maintain it with a team, together you will work hand in hand with our Graphic Designers
2. You will be responsible for the website architecture and can choose the technologies
3. You will support the Marketing Team with project execution

Wider Responsibilities

As a member of Grundstein Global, you are expected to support the running and development of the community through accepting and creating tasks/projects related to your area(s) of expertise, or an area you are interested in.

Requirements

Basic Requirements:

1. Currently enrolled in a full-time undergraduate course
2. Strong communicator
3. Excellent teamwork skills
4. Good work ethic
5. Globally minded
6. Engaged in extra-curricular activities

Role Requirements:

1. Experience in building websites
2. Good knowledge of HTML, CSS, JavaScript, PHP, SQL or any other relevant language for creating a new website
3. Able to write structured and maintainable code
4. Experience with at least one major Content Management System, e.g. Wordpress or Typo3
5. A "getting things done" working attitude – creative, resourceful, hands-on
6. A basic understanding of the Online Marketing landscape (channels, vendors, technologies)

Preferable, but not required:

1. Experience with analytics and email marketing software as well as similar tools
2. Currently enrolled in a computing-related undergraduate course
